

SAP PP-PI: Process Order Lifecycle

Hands-on training · Order-to-confirmation

The process order moves through five stages from creation to settlement

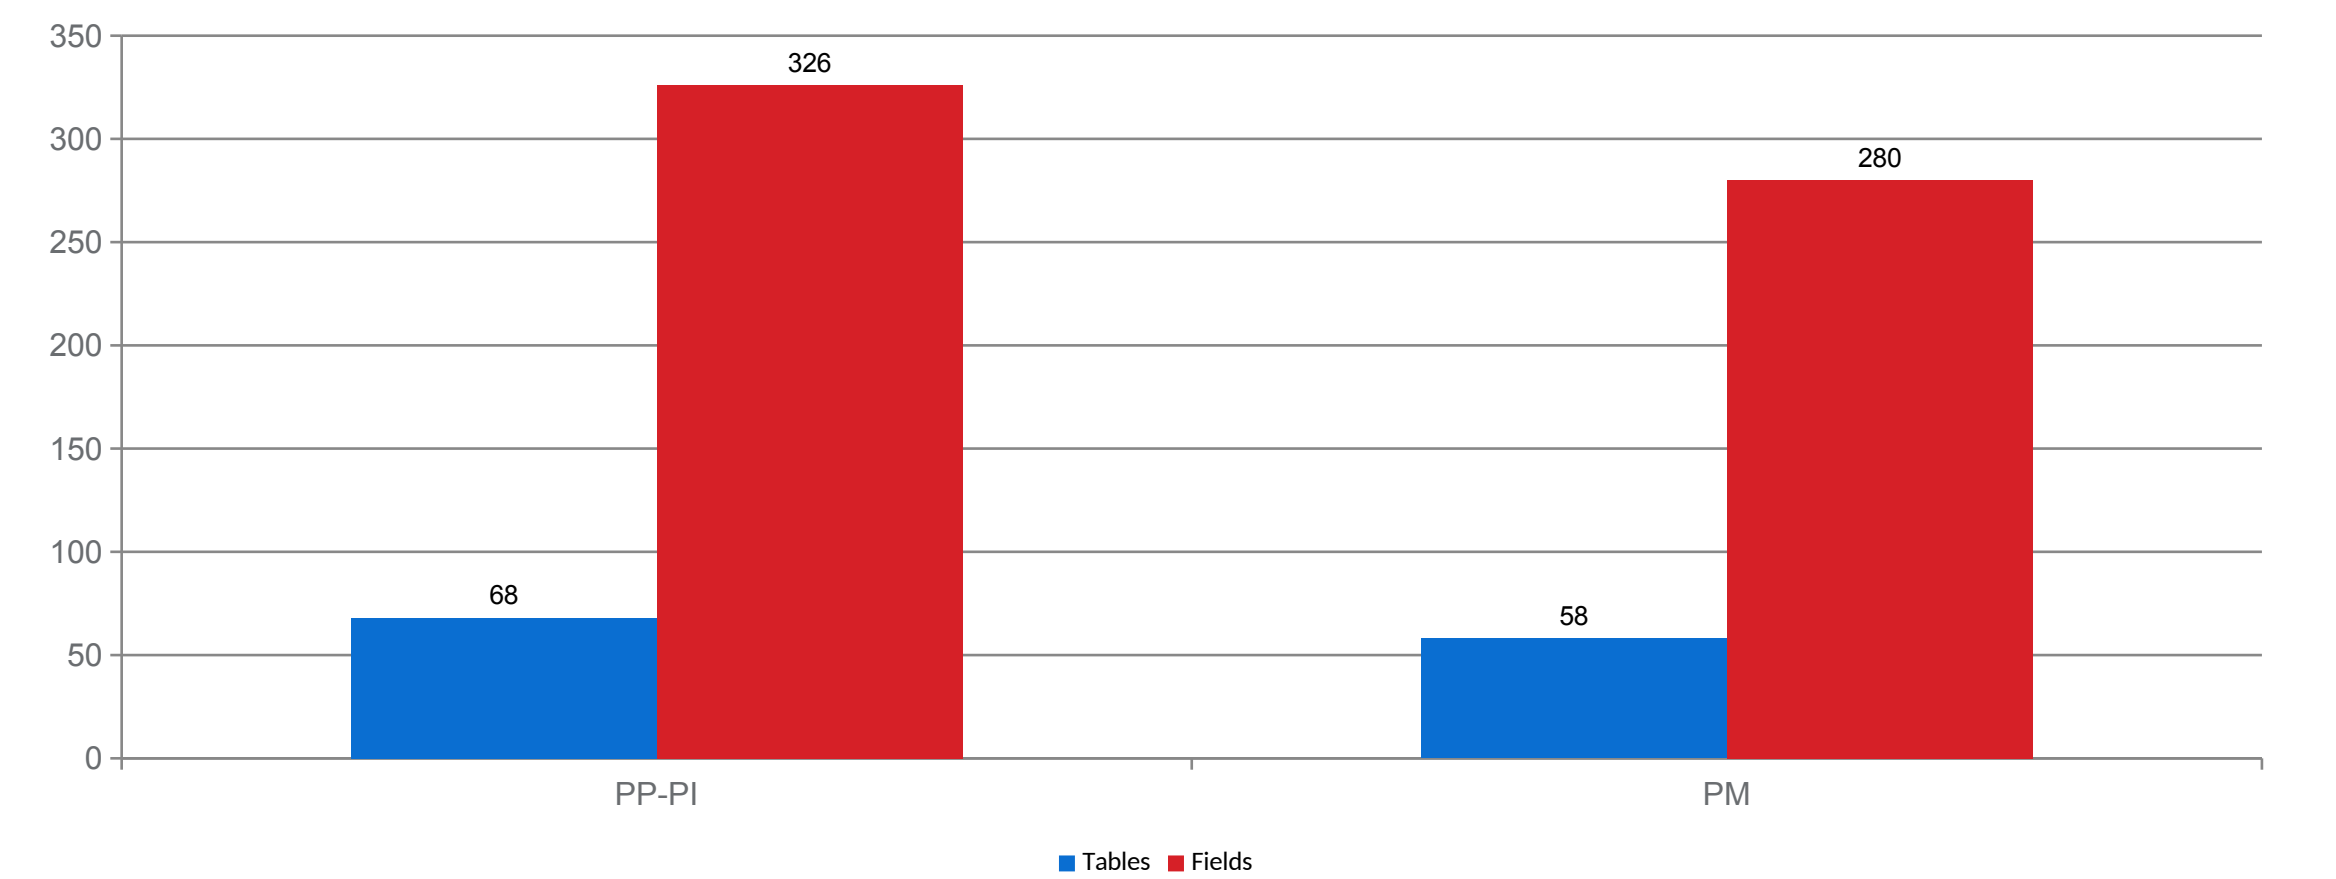

Process Flow (template)

Each stage maps to a transaction and a table you will use

Stage	Tcode	Table
Create process order	C0R1	AUFG / AFKO
Release	C0R2	status REL
Control recipe	C053	PI sheet
Confirmation	C0R6N	AFRU
Settlement	K088	C0 docs

PP-PI carries more tables and fields than PM — plan training time accordingly

Recap

1. **Five stages:** COR1 → COR2 → CO53 → COR6N → KO88.
2. Confirmations post to AFRU; settlement closes the order.
3. PP-PI is the larger dataset — budget extra lab time.
