

Assessing ERP migration readiness: an ECC→S/4HANA case analysis

University Assignment · Semester Project · 2026

Student: Sali Halif · ID 00000
Supervisor: Course Instructor

Module: Enterprise Systems (ERP-402)

The assignment evaluates one firm's readiness to migrate its production ERP

Brief

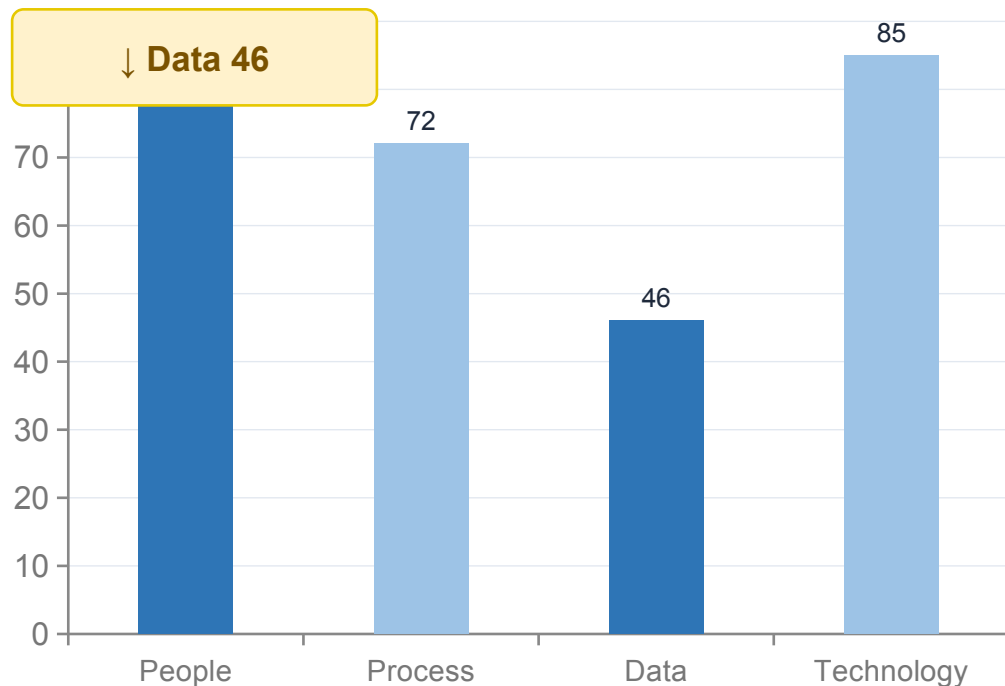

Task: assess ECC→S/4HANA readiness for a manufacturing client.

Frame: people, process, data, technology readiness dimensions.

Deliverable: evidence-based recommendation with a gate criterion.

Readiness is strong on technology but weakest on data quality

Data-quality readiness lags the other three dimensions by a wide margin

What to take away

- Technology highest (85): platform sized

Data lowest (46): mapping gaps remain

People/Process adequate (72–78)

Data is the binding constraint

Closing the data gap is the single highest-leverage action before cutover

Analysis

Bottleneck: data readiness gates the whole migration.

Leverage: raising completeness lifts the weakest dimension fastest.

Cost: dictionary work is low-cost vs. a failed cutover.

Conclusions

1. **Overall readiness is moderate:** one dimension drags the score.
2. **Data quality is the gate:** score 46 vs 72–85 elsewhere.
3. **Recommendation:** complete field mapping before scheduling SUM.
