

Field-mapping completeness predicts ERP conversion defects

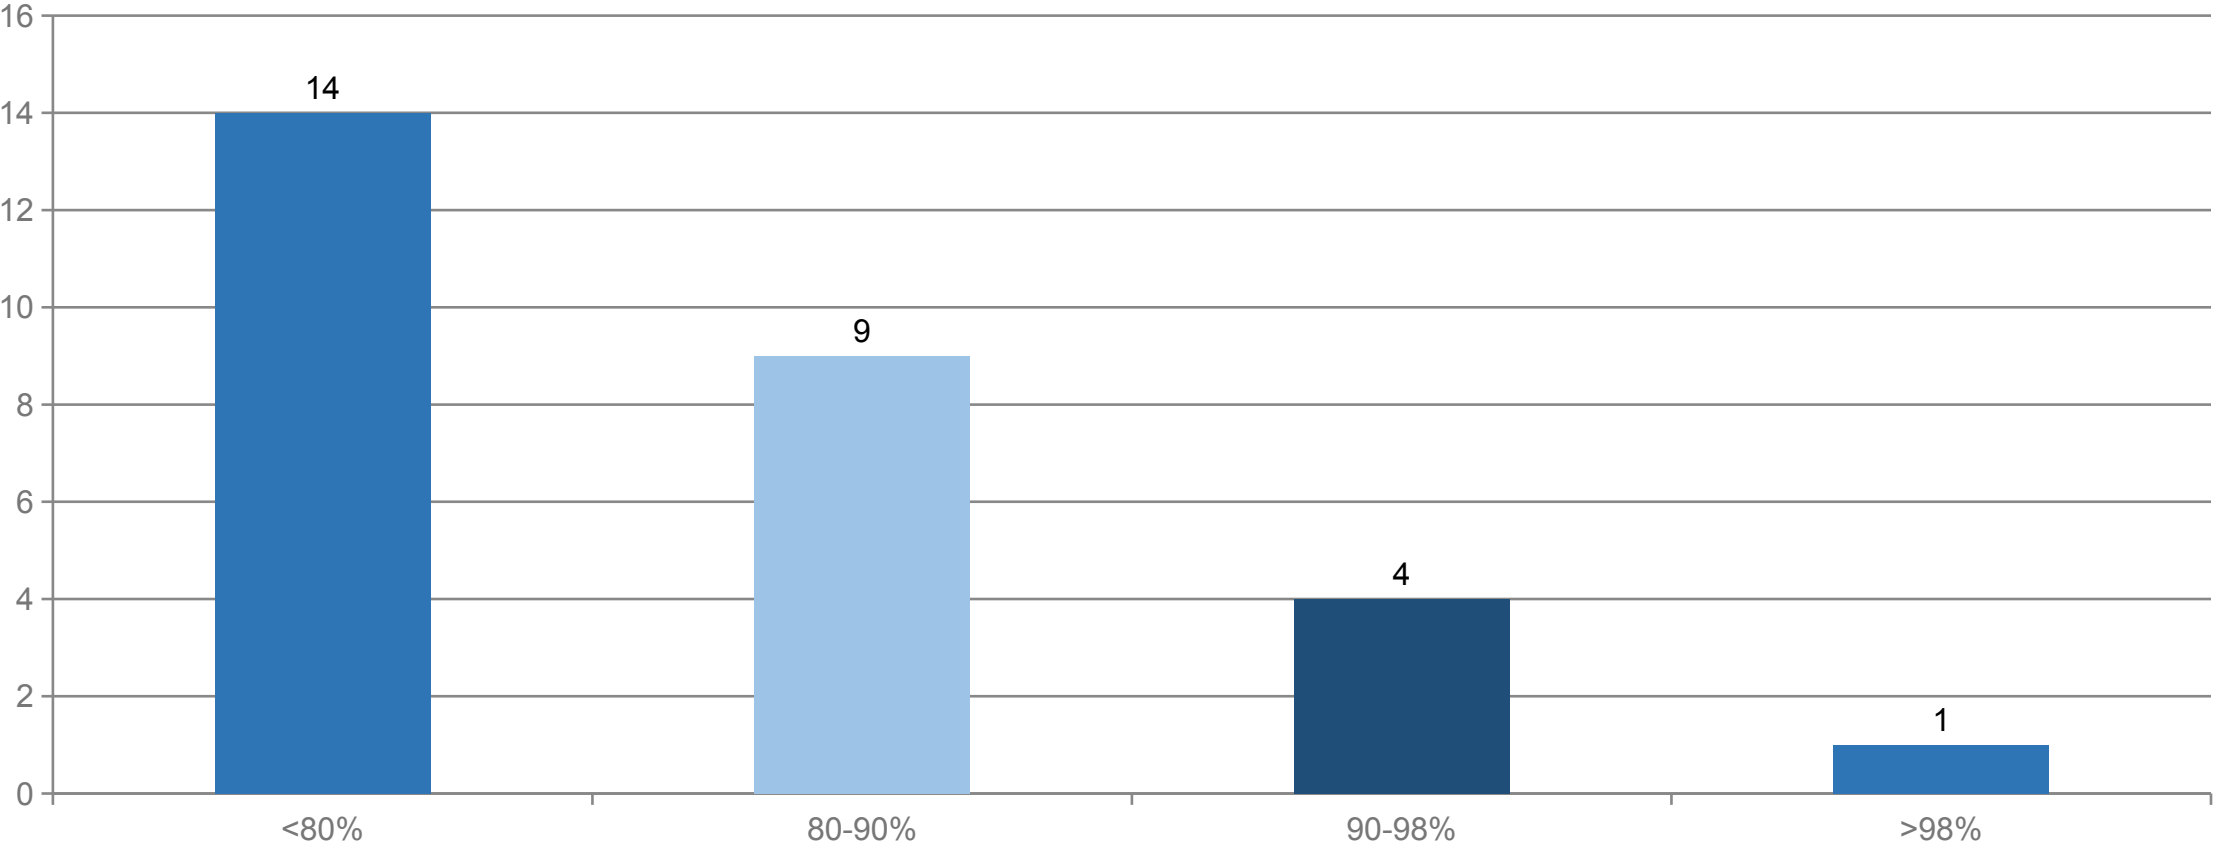

Research project · Information Systems

The study runs from question to conclusion through a clear design

Research Design (method flow)

Higher completeness coincides with 14× fewer defects

Summary: a strong, monotonic completeness→defect gradient

Holds

PM+PP-PI

both

1. Completeness, not table count, is the readiness signal.
2. Adopt a field-completeness gate; replicate across clients (limitation).
